## What is the Conscious Field Theory:

Conscious Field Theory (CFT) is a fundamental sudo-scientific theory (not yet proven by science). It is not based on religion, or spirituality, and could one day be proven through a series of physical, energetic, and phycological testing of bodies including objects, plants, planets, stars and animals (including humans).

The theory itself is that our conscious physical “reality” is the perception of a single frequency of consciousness, and that “actuality” in our universe consists of infinite "realities" of all conscious vibrational frequencies stacked on top of each other. This makes infinite consciousness a fundamental building block of the universe, along with energy, and together consciousness and energy actuate mass, gravity, and the temporal perception of the speed of light in our “reality”, as well as each of the other conscious realities that exist within the universe simultaneously.

Because we are addressing the fundamental root of the universe, to better explain this theory we are going to use one of the most important equations that Albert Einstein wrote:  $E = Mc^2$  And lets remember that Einstein once said “Reality is merely an illusion, albeit a very persistent one.” In CFT our “reality” is in some ways an “illusion” because the channel can just be “changed” to an other reality, and you would no longer experience it, but all

conscious vibrational fields (or multi-realities) are surrounding us at all times.

Here is our modified equation for CFT:

$$EC_1=Mc^2$$

The equation would read as; Energy multiplied (or fractled) by the subset frequency vibration of consciousness in our primary reality ( $C_1$ ), is equal to our reality's mass, times the speed of light squared. Simultaneously you can have infinite other conscious vibrational frequencies with  $C_2, C_3, C_n \dots$ . For our reality, Consciousness would equal 1, and therefore the mass of our reality stays the same, but when you combine all conscious realities together, the accumulated mass is more than just the mass of our reality. Additionally you can have conscious frequencies with very little mass, or no physical mass which would have much less energy in them. Therefore the total mass of the universe is the sum of all energy within all frequencies of consciousness.

If we wanted to calculate the mass of the entire universe it would look something like this:

$$M_u = \frac{\sum E(C_1+C_{n+1})}{c^2}$$

In this way, the total mass of the universe is actually the sum total of all the energy in all the conscious realities of the universe, divided by the speed of light squared. Again the mass of the universe is not just the sum of mass in our perceived reality, but the sum of all consciously perceived realities, and this equation would give the Mass in relation to our "reality" and its speed of light.

The principle of conscious frequencies, functions on exactly the same scientifically proven principle as the spectrum for wavelengths of electromagnetic radiation, also known as light. In our human conscious reality, we only see "visible" light, yet simultaneously there are infinite

different frequencies of light and waves that are in the same space-time. Conscious Field Theory would work exactly the same way, with infinite different frequencies of consciousness.

Consciousness is not a wave or a particle that exists within space-time, and is currently not detectable by science. CFT does give rise to the possibility that consciousness itself could be a spectrum of frequency fields based on vibration outside of space-time.

If proven, this would make consciousness as important to our universe as energy. This would also mean that everything around us, weather we can see it or not (like all simultaneous TV and radio waves), is conscious.

CFT is an alternative explanation for the difference in gravitational mass to keep the galaxies of the universe held together because it can account for the 80%+ difference in mass within the infinite other conscious vibrational field frequencies that we cannot detect from our perceived reality. There would be no need for the majority of dark mater or dark energy that is currently theorized, although dark matter and dark energy still can exist within our reality and other realities, just in smaller amounts. Depending on what Dark Matter turns out to be, there may not be a need for large amounts of Weakly Interacting Massive Particles (WIMPs) within our

perceived reality, in other words, this known matter would be undetectable because the mass is actually in other conscious vibrational frequency fields that can't interact directly with our realities conscious frequency.

Experimental verification of CFT would be found in proving consciousness within a diversity of various physical bodies. To do this, the first step would be to create a broad scientific definition of what consciousness is, as there currently is still no agreed upon definition. CFT does not consider "higher consciousness", the type which humans and "intelligent" humanoid lifeforms may perceive, is in anyway the fundamental form of consciousness. CFT relies on the broadest definition of consciousness as being "observable awareness", as there is no need to be actively (physically or energetically) interacting with your surroundings or environment to be or to have consciousness, but there does need to be active observing through awareness to be conscious.

List of different types of Conciseness: (list not complete)

- Simple Consciousness
- Overvalue Consciousness
- Non-Human Consciousness
- Non-Dualistic Consciousness
- Electronic/Computer/AI Consciousness
- Altered Consciousness
- Streaming Consciousness
- Self Consciousness
- Normal Consciousness
- Heightened Consciousness
- Phenomenal Consciousness
- Access Consciousness
- Organism Consciousness
- Control Consciousness
- Introspective Consciousness
- Subjective Consciousness
- State/Event Consciousness
- Animal Consciousness
- Pre-Linguistic Consciousness

Plant Consciousness  
Artifact Consciousness  
Artificial Consciousness  
Human-Like Consciousness  
Underlying Consciousness  
Internal Consciousness  
External Consciousness  
Mammalian Consciousness  
Primary Consciousness  
Avian Consciousness  
Biological Consciousness  
High-Order Consciousness  
Reptilian Consciousness  
Natural Consciousness  
Earth Consciousness  
Planetary Consciousness  
Star Consciousness  
Integral Consciousness  
Intuitive Consciousness  
Integrated Consciousness  
Fragmented Consciousness  
Altered Consciousness  
Sub Consciousness  
Mental Consciousness  
Body Consciousness  
Impaired Consciousness  
Streaming Consciousness  
Personal Consciousness  
Group Consciousness  
Social Consciousness  
Krishna Consciousness  
Cosmic Consciousness  
Global Consciousness  
Singular Consciousness  
Duel Consciousness  
Collective Consciousness  
Spiritual Consciousness  
Template Consciousness

Blueprint Consciousness  
Universal Consciousness  
Planetary Consciousness  
Galactic Consciousness  
Incarnated Consciousness  
Heightened Consciousness  
Experiential Consciousness  
Virtual Consciousness

Spectrums of Consciousness:

Glasgow Coma Scale: 3-15 levels of Consciousness

Range of all possible frequencies of consciousness vibration fields

### Experiments:

The easiest scientific process for CFT to gain exposure and support within mainstream science, is to question the foundational context that science has a negative bias against individual perceptions. Science can show that a group of individuals will all perceive reality differently and therefore takes a bias in that an individual's perception is not reality. Science puts emphasis on computerized and mechanized gathering of data, as opposed to perceived data gathered by human experience. In CTF our physical objects of machines and instruments would be the most fixed conscious fields, and only experience a very limited spectrum of single-perspective consciousness. On the other hand an organic conscious individual like a human person, is primarily water and energy, and through consciousness perception, may have the ability to perceive multiple frequencies of consciousness at different times.

The simplest of perception experiments where you have a group of people all who experience the event differently can easily be shown as supportive evidence that CFT is actually how our universe functions, because each individual can actually be perceiving a different frequency of consciousness simultaneously. In other words if CFT were proven, it would show that multiple realities could be experienced simultaneously within the same space-time of a single event. The interesting thing is, this is exactly what our data is telling us, that humans perceive events differently even when the event takes place at the same time and same location. This would have

profound implications on our society if indeed proven, as it would no longer be applicable to implement top down government control in a one-size fits all world view of scientific reality. Instead our social systems could be designed in a holographic way so that individuals experiencing different frequencies of conscious realities could all live side by side without being ridiculed or pushed into believing world views that are not their own.

[http://seedmagazine.com/content/article/the\\_reality\\_tests/](http://seedmagazine.com/content/article/the_reality_tests/)

Additional Experimental verification of CFT would be found in proving consciousness within various physical bodies. This would include humans of course, which we all agree do have consciousness, yet science can't seem to prove it as we only have statistical evidence. Additionally we would continue to test the variety of species of animals, from high conscious orcas, whales, apes, and some birds, all the way to insects and bacteria. Additionally it would be necessary to test consciousness in plants, fungi, and algae. Much of this testing has already begun, but testing objects has yet to start. It would be necessary to find consciousness in physical, non-biological objects. It would make sense to test for consciousness within the earth itself, as well as the sun and other planets with live electromagnetic cores, as planets without live electromagnetic cores may not be conscious. The sun also would need to be tested for consciousness. Testing non-magnetic, non-energetic objects for consciousness would be the most difficult, but would be key to proving that consciousness is fundamental to the entire universe.

If the Earth and Sun were to be found conscious, the theory of higher consciousness would potentially imply that conscious communications would take place at VERY high frequency levels within electromagnetic gravitational wavelengths. The context is that it would flip our understanding of conciseness where our own communication systems would be low and slow, and plants and other lifeforms would have higher faster communication systems. In other words communications would be occurring at the level of micro-seconds, or even much shorter. This would

mean that basic human communication forms are very LOW in vibration and speed compared to larger conscious bodies within the universe. A simple stepping stone could be plant consciousness which would be much faster than ours, but may be much more attainable than that of a planet or sun. This is also a reasonable place to mention that this would flip the concept of “sub-conscious” and “un-conscious” to be higher-conscious and expanded conscious, as our fundamental conscious systems of our brains, the sub and un conscious, would be our primary forms of consciousness, and our experiential consciousness would actually be our low, slow form of consciousness. There is much work to be done to better understand these concepts.

An other experiment, if it worked, that could support the existence of multiple conscious realities, would be to raise the conscious frequency of an object, either biological or material. If the object disappeared from our reality, that would indicate that it had entered into another conscious frequency and would no longer be detectable by any scientific instrument from within this reality. In other words it would be possible for matter to literally disappear without giving off energy, as the mass would not disappear from the universe itself.

It would be very difficult to conduct experiments on our conscious field itself, as that would be like trying to create detectors out of visible light itself to detect visible light. If CFT is real, there must eventually be some way to calculate at what vibrational frequency exists at. This calculations would be extremely complicated as they would deal with multi-dimensional frequencies, not like simple wavelengths of the electromagnetic spectrum.

It is important to understand how perception in other vibrational frequencies of consciousness can exist simultaneously on top of each other, and both our frequency of reality, and theirs can be physical. A person within an other vibrational frequency would perceive their reality as physical, even though we couldn't see it from our vibrational frequency of reality. It is the same concept of changing the channel on the TV or the Radio and completely changing the image or story of what you are watching or listening to. Once you change it, the entirety of the image disappears from view, but it is still there all around you in the form of TV or Radio waves.

Together all of these “channels” of consciousness equate to the Full Consciousness Spectrum which is all vibrational frequency fields simultaneously. We, in this reality, only experience a single vibrational field that we call "reality", yet the universe on a whole has all frequencies of consciousness.

### What CFT could Explain:

If CFT was experimentally proven, it would help explain a plethora of natural and psychological phenomenon.

How the universe and the big-bang emerged from “nothing”.

How orderly patterns (we call them laws of nature) emerged, and how they persist. To my knowledge, physics takes these patterns for granted but has no explanation as to their emergence or persistence.

How life emerged (life is an aspect of consciousness so it was there but hidden all along)

How mind and consciousness emerged

Why evolution is orderly

Why evolution generally gets more complex.

Free will

The relationship of mind and body and mind and brain.

Placebo effect/positive thinking/power of belief/power of prayer/psychokinesis.

[Near Death Experiences/Out of Body Experiences/Ghosts](#)

Mediumship: There is nothing preventing consciousness within a body from communicating with a consciousness that does not have one.

Hauntings: A consciousness fundamental to the universe means that consciousness in some form exists in everything, including objects that we regard as non living.

All positive parapsychology studies. Parapsychology can be defined as the study of consciousness in physics.

Group Behavior including Corporate Behavior: Consciousness patterns can form beyond individual humans.

The Decline Effect as seen in medicine and physics: In essence, because consciousness affects everything, the reach of psychological factors extends to all parts of reality.

The Effects of a full moon: Under this theory, the moon is conscious as well and may indeed have a psychic effect on humankind.

Global Consciousness: [The Global Consciousness Project](#)

The Water Crystal Experiments of Masaru Emoto. ([Described here](#)).

Some UFO phenomenon.

You would also infinitely increase the probability of intelligent life in the universe because it can exist in unlimited different conscious vibrational frequencies, not just with water etc...

If all plants, animals, and the earth itself is conscious under CFT, then the destruction of the biodiversity of the earth and its animal inhabitants would be against the natural law of humanity which is the foundation of the Declaration of Independence and the Constitutions of our Society. And Many more. . .

### Other concepts to consider:

Some would say that we should not focus on CFT because it may not be the most probable to successfully prove. Yet when choosing an experimental focus, we can not just work on science that has high probability to have achievable results, but also on science that is important in the context of solving current societal and individual problems.

CFT does solve many social and individual problems. Regardless of whether or not we are likely to solve these issues soon, it is still essential to research them.

Science questions the existence of consciousness, yet scientists can agree that consciousness created science and the scientific method. Therefore science does acknowledge the definitive truth that consciousness exists separate from the physical world that science can prove. But that is it, in every other regard, consciousness is not proven science at all.

The fact that mathematics can define almost the entirety of the physical world and universe adds to the evidence that space-time is a mathematical illusion and only represents our perceived reality, not the infinite actuality of consciousness.

### Types of Science:

**“Proven Science”** - This is science that has been experimentally proven and verified by many blind studies across the world.

**“Experimental Science”** - Scientific tests that are trying to prove a scientific theory, but have yet to be proven, or have only been proven once, or without blind verification

**“Scientific Theory”** - science that is only in its idea form, and has not been proven or experiments have not yet been devised for it.

**“Scientific Method”** - The method that is behind all scientific discovery. In short a method of inquiry based on [empirical](#) and [measurable](#) evidence, consisting in systematic observation, measurement, and experiment, and the formulation, testing, and modification of [hypotheses](#). ([http://en.wikipedia.org/wiki/Scientific\\_method](http://en.wikipedia.org/wiki/Scientific_method))

**“Sudo-Science”** - types of science that use the scientific method, but focus on areas of study and discovery that are not academically accepted as viable for scientific advancement.

#### List of existing **proven science** that are related to CFT.

Spectrum of Electromagnetic wave lengths of light. (1800...)

Various types of energy science.

#### List of existing experiments that have been conducted related to CFT:

Plants and consciousness: Turns out they do, [neural network](#) from roots

Plants recognizing People: [to recognize and react to different people intelligence in slime mold](#). ([And here](#))

Invertebrate consciousness: [invertebrates](#)

Avian Consciousness: [birds](#)

Insect Consciousness: [it has been demonstrated in insects](#)

Worms: [appears to be group consciousness](#).

Animals & Human relations: [plants can relate to humans](#)

Interspecies: [can relate to each other](#) ([And here](#).)

psychokinesis studies. From 1979 to 1993 the [Princeton Engineering Anomalies Program](#) ([Here are the technical papers](#).) You can find [a similar ongoing PK trial here](#).

entanglement

Telepathy: ([Here is the latest analysis I could find. It includes Milton and Wiseman](#).)

[Zener cards](#): [JCSpaper](#)

#### List of other academically accepted scientific theories (not proven science) that are related.

Anything relating to energy, dark energy, and dark matter.

String Theory, M Theory . . .

Other related sudo-scientific theories/ideas (not part of major scientific fields including CFT) that are related)

Morphic Resonance and Morphic Field theory

The Integrated Information Theory (ITT)

the Electromagnetic Theory of Consciousness

panpsychism.

Biocentrism

The Holographic Universe Theory

That DNA could function as a HUGE antenna. (like how antenna in cell phones are small and coiled to maximize length.)
